CANDULOR – HIGH END ONLY

For over 80 years, we have been synonymous with high-end prosthetics in the dental sector and offer a complete system for partial, full, hybrid and implant-supported prosthetics: from tooth lines and denture resins to auxiliary materials and dental equipment for registration and articulation.

CANDULOR's product and brand development as well as our own school, the Swiss School of Prosthetics (SSOP), are located at our headquarters in Switzerland. From our location in Germany, we organize worldwide sales and maintain the closest possible contact with our customers and partners.

With our approximately 65 employees, we are active either directly or via international sales partners, depending on the region. Our aim is to provide optimal prosthetic solutions and successful treatment outcomes with a high level of appreciation through high-quality products and valuable knowledge transfer through the SSOP.

TOOTHLINES. DESIGNED TO CAPTURE PEOPLES' IMAGINATION.

The CANDULOR tooth lines have always aimed at capturing peoples' imagination. Natural authenticity – with its exceptional esthetics, color stability and function – makes our tooth lines extremely versatile with every material.

PHYSIOSTAR® NFC+

THEIR SURFACE TEXTURE, LAYERING AND COLOR EFFECT MAKE THEM UNIQUE.

The NFC+ material impresses with its very good abrasion resistance, which is significantly higher than that of the tooth materials previously used by Candulor. The particularly abrasion-resistant NFC+ material was developed to counteract premature wear of teeth and the associated vertical loss of dimension.

Material

NFC+ is a composite based on a urethane dimethyl acrylate matrix (UDMA matrix) composed of various types and sizes of fillers as well as PMMA clusters. This results in very good physical material properties, such as abrasion resistance and shear strength.

Layering

Close attention to give a natural appearance has also been a feature of the layering and esthetics. The material is built-up in four layers, which guarantees colorfastness in the mouth and gives a particularly natural appearance.

NANOFILLED COMPOSITE

Composite material with a homogeneous distribution of inorganic fillers and PMMA clusters

-  UDMA matrix
-  Compressed silanized SiO₂
-  Silanized SiO₂ nanoparticles
-  PMMA clusters
-  Inorganically filled UDMA polymer

PHYSIOSELECT® TCR

A LARGE VARIETY OF YOUNG, AUTHENTIC MOLDS FOR THAT YOUTHFUL FEELING.

The highly cross-linked TCR material is noted for its material and resistance properties.

Material

TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are evenly cross-linked. This is done by again cross-linking the previously cross-linked polymer with the matrix in the production process. This ensures good abrasion resistance and resistance to plaque.

Layering

The PhysioSelect® TCR is a composition of slightly translucent incisal contours with diskreet mamelons and marginal ridge effects paired with a lively 4-fold layering and incisal light refraction. The surface structure gives the tooth a natural, youthful refraction of light.

TWINCROSSED RESIN

Highly cross-linked PMMA network with increased cross-linking of the polymer chains

-  Polymer chains
-  Increased cross-linking

PHYSIOSET® TCR

EXCEPTIONAL VARIETY OF TYPE-SPECIFIC TOOTH MOLDS AND A VERY SPECIAL SURFACE PROFILE.

The double cross-linked TCR material has good material and resistance properties.

Material

TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are cross-linked. This is done by producing highly cross-linked polymer in combination with cross-linked matrix. This ensures good abrasion resistance and resistance to plaque*.

Layering

The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

TWINCROSSEDRESIN

Highly cross-linked PMMA network with cross-linking of the polymer chains

 Polymer chains
 Increased cross-linking

PREFERENCE® ACRYLIC

A COMBINATION OF NATURAL ESTHETICS AND HIGH USER-FRIENDLINESS.

The Preference® tooth line is a combination of natural esthetics and user-friendliness. The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

Material

The available PMMA polymers on the market have significant differences in purity, enclosed porosities and contamination. Consistent grain size and molecular weight are also deciding factors in the production of teeth with good and consistent quality.

ACRYLIC

Proven PMMA network with less pronounced cross-linking of the polymer chains

 Polymer chains
 Sporadic cross-linking

PHYSIOSTAR® NFC+:
*Its surface texture,
 layering and color effect
 make it unique.*

Its material formula of NanoFilledComposite® (NFC+) makes the PhysioStar® NFC+ stand out from other CANDULOR tooth lines.

PHYSIOSTAR® NFC+

Perfection begins where a tooth line feels as natural for the patient as his/her own teeth. Color fastness, esthetics and shear strength – these are the strong points of PhysioStar® NFC+.

CONDYLOFORM® II NFC+

Prof. Dr. A. Gerber established the functional relationship between the shapes of the temporomandibular joints and the teeth and as a result, developed the Condyloform® tooth. The modern Condyloform II NFC+ offers anatomically good occlusion design with age-adapted morphological and natural occlusal proportions and functional areas. The mortar-pestle principle according to Prof. Dr. A. Gerber was also integrated into the masticatory surfaces. This results in autonomous chewing stability as the palatal cusp of the maxillary teeth engages into the opposing central fossa of the mandibular tooth.

BONARTIC® II NFC+

The occlusion morphology of the lower posterior teeth stands in relation to the condyle path. The inclination of the occlusal plane (Spee, Wilson) can be arranged individually and reliably with the Bonartic® II NFC+. It is the most important stabilizing element for every prosthetic restoration. The teeth were optimized in terms of a natural tooth to two-tooth relationship.

WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as the two occlusion concepts Condyliform® II NFC+ and Bonartic® II NFC+. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PHYSIOSTAR® NFC+ A – D SHADES SHADE GUIDE

The 16 A – D shades and the 2 Bleach shades BL2 and BL4 can be determined with the PhysioStar® NFC+ A – D shade guide.

The PhysioStar® NFC+ A – D Shades shade guide serves to determine the shade of:

- > PhysioStar® NFC+ anteriors
- > Condyloform® II NFC+ posteriors
- > Bonartic® II NFC+ posteriors

PHYSIOSTAR® NFC+ CANDULOR SHADES SHADE GUIDE

The 12 CANDULOR shades can be determined with the PhysioStar® NFC+ CANDULOR shade guide. The shade tabs are made of NFC+ material and are color-matched to the NFC+ tooth line.

The PhysioStar® NFC+ CANDULOR Shades shade guide serves to determine the shade of:

- > PhysioStar® NFC+ anteriors
- > Condyloform® II NFC+ posteriors
- > Bonartic® II NFC+ posteriors

PHYSIOSELECT® TCR:
A large variety of
young, authentic molds
for that new feeling.

The fresh, youthful design of the PhysioSelect® TCR was developed from the origin of proven tooth molds. The teeth, which are designed in Switzerland, are made of the reliable TwinCrossedResin material.

PHYSIOSELECT® TCR

The PhysioSelect® TCR is a composition of slightly translucent incisal contours with diskreet mamelons and translucent marginal ridge effects paired with a lively 4-fold layering and incisal light refraction.

A fine microstructure with horizontal growth grooves, plus a striking macrostructure with vertical ridges, grooves and fine openings gives the tooth a naturally youthful refraction.

BONSELECT TCR®

The new posterior BonSelect TCR® tooth was created to match the PhysioSelect® TCR – a posterior tooth with an occlusion concept that can be used multifunctionally for the most common setup systems.

Whether tooth-to-tooth or tooth-to-two-tooth, the BonSelect TCR® has a bifunctional tooth geometry that makes both setup systems possible. Simplified centric determination through defined contact points leads to an easily adjustable occlusion.

WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 18 maxillary and 4 mandibular sets as well as the multifunctional occlusion concept BonSelect TCR®. The guide serves to help select molds for the individual assessment and design of prosthetics in daily routine.

PHYSIOSELECT® TCR SHADE GUIDE

The 16 A - D and 2 bleach shades BL2 and BL4 can be selected with the PhysioSelect® TCR shade guide. The shade tabs are made of original TCR material which ensures shade conformity with the tooth sets.

The PhysioSelect® TCR shade guide is used to determine the shade of:

- > PhysioSelect® TCR anteriors
- > BonSelect TCR® posteriors

PHYSIOSET® TCR:
*Exceptional variety of
 type-specific tooth
 molds and a special
 surface profile.*

Resin does not necessarily equal resin. As proven by CANDULOR with the TCR tooth line. The variety of molds results in a balanced assortment of type-specific tooth molds. The double cross-linked TCR (TwinCrossedResin) material has good material and resistance properties.

PHYSIOSET® TCR

The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

**PHYSIOSET® TCR
 X-SHAPES****

The PhysioSet® TCR tooth line has been complemented with 18 new X-shapes made of the resistant TwinCrossedResin material which is plaque and abrasion resistant*.

BONARTIC® TCR

The Bonartic® TCR combines the physiological laws of nature and the esthetic-morphological demands into a good looking denture tooth.

- > Tooth to two-tooth relationship
- > ABC contacts – functional/
balance-sided/centric

* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

** These products are only available in North America.

WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 22 maxillary and 8 mandibular sets as well as the occlusion concept Bonartic® TCR. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PHYSIOSET® TCR SHADE GUIDE

The PhysioSet® TCR shade guide combines two shade systems. The most popular shades – 9 CANDULOR and 11 A – D shades – can be determined. The shade tabs are made of original TCR material which ensures shade conformity with the tooth sets.

The PhysioSet® TCR shade guide serves to determine the shade of:

- > PhysioSet® TCR anteriors
- > Bonartic® TCR posteriors

The discs TCR Mono and TCR Multi** for the CAD/CAM technique can be found on page 44.

TOOTH MOLDS

PHYSIOSET® TCR X-SHAPES
UPPER JAW ANTERIORS

PREFERENCE® Acrylic:
The combination of
natural esthetics and
high user-friendliness.

The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

PREFERENCE® ACRYLIC ANTERIORS

The naturalness of the teeth is created by the three-layered, authentic shade design. The diversity in shapes enables that you can choose the appropriate tooth for your patient.

PREFERENCE® ACRYLIC POSTERIOURS

The posterior teeth are easy to position owing to their defined centricity. Due to the functionally designed occlusion surface, these can be used multi-functionally for the most common set-up philosophies.

WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as a Preference® Acrylic maxillary and mandibular posterior mold each. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PREFERENCE® ACRYLIC SHADE GUIDE

The Preference® Acrylic shade guide serves the selection of all 18 tooth shades of the Preference® Acrylic tooth line. You can now determine the tooth shade which matches your patient best individually from the 16 A – D shades. The integration of the two Bleach shades BL2 and BL4 extends the shade spectrum for the selection of very bright tooth shades depending on the wishes of your patients.

The Preference® Acrylic shade guide serves to determine the shade of:

- > Preference® Acrylic anteriors
- > Preference® Acrylic posteriors

PLEXIGLASS TOOTH CABINET FOUR DRAWERS

A space can always be found for this handy 4-drawer tooth cabinet made of plexiglass. With 2 inserts each for 33 anterior sets of teeth and 2 inserts each for 22 posterior sets of teeth, this storage unit ensures that 110 sets of teeth are always within easy reach.

C-BOX TOOTH CABINET FOUR DRAWERS

The C-Box design consists resistant powder-coated aluminum. The tooth cabinet with its 4 sturdy drawers provides space for up to 220 sets of teeth and can be stacked. The plastic inserts allow optimal presentation of the tooth sets so that the right set is always within easy reach. The label slots make it easy to label the handles. Clarity and functionality thus simplify finding the right set of teeth as well as the managing of tooth stocks.

ORDERING DETAILS

Plexiglass tooth cabinet 1 item

Art. no.	Product
681813	Plexiglass tooth cabinet with 4 drawers 31 × 23 × 9.5 cm (L/W/H)
590501	Inserts, transparent, for anterior sets (max. 33)
664546	Inserts, transparent, for PHYSIOSTAR® NFC+ / PHYSIOSELECT® TCR anterior sets (max. 27)
590502	Inserts, transparent, for posterior sets (max. 22)

C-Box tooth cabinet 1 item

Art. no.	Product
681814	C-Box tooth cabinet with 4 drawers 11 × 7.5 × 40 cm (H/W/D)
590501	Inserts, transparent, for anterior sets (max. 33)
664546	Inserts, transparent, for PHYSIOSTAR® NFC+ / PHYSIOSELECT® TCR anterior sets (max. 27)
590502	Inserts, transparent, for posterior sets (max. 22)

TOOTH CABINET SIX DRAWERS

The silver-colored sturdy metal housing makes for an attractive design in combination with the 6 red plastic drawers. The tooth cabinet is supplied with 3 inserts each for 90 anterior sets of teeth and 3 inserts each for 60 posterior sets of teeth, thus providing storage for 450 sets of teeth.

RESINS FOR DENTURES. THE MATERIAL DENTURES ARE MADE FROM.

Every person has his/her very own natural gingiva. To replicate this as realistically as possible, our path led from transparent resins to specific semi-opaque pigmentation of the CANDULOR denture materials which refract and reflect incident light, thus making artificial gums appear in natural pink tones.

When artificial appearance cannot be distinguished from natural appearance, that is when we have achieved our goal. A broad range of shades with numerous hues gives us the opportunity of creating perfect customized mixtures for every customer.

XPLEX

SELF/HOT-CURING HIGH IMPACT DENTURE BASE MATERIAL

XPLEX – the high-impact polymer for dual use. Developed to cover the different processes and needs in the laboratory. The polymer is suitable for cold and hot polymerization. Whether packing, pressing or pouring: the choice of HOT or COLD processing is governed by the respective HOT or COLD monomer component.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features

- > High impact strength
- > Good flow and modeling properties
- > Good bond to denture teeth
- > Good grinding and polishing properties
- > Esthetic appearance
- > Low adhesion of plaque and low tendency to diskoloration
- > Easy dosing

Descriptions

- > Complete denture prosthetics
- > Partial denture prosthetics
- > Implant prosthetics
- > Repairs to XPLEX HOT can be performed with XPLEX COLD

AESTHETIC BLUE SELF-CURING DENTURE BASE MATERIAL

Self-curing AESTHETIC BLUE excels in particular through its good flow and modelling properties. This assures simple processing by both the cast and packing technique, even in case of two or more saddles. Different opaque shades, pink transparent and clear are available.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features

- > Semi-opaque pigmentation
- > Good flow characteristics
- > Good fit
- > Shape and color stability
- > Physiological colors

AESTHETIC RED HEAT-CURING DENTURE BASE MATERIAL

RED – the AESTHETIC heat-curing polymer displays the entire spectrum of the harmonious CANDULOR color system. This gives the option of recreating the natural perfection of the gingiva. Different opaque shades, pink transparent and clear are available. Processing, shape and color stability are standard for heat-curing denture base materials.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features

- > High accuracy of fit
- > Physiological colors
- > Low residual monomer content
- > Wide range of polymerization variants
- > Color stability
- > Simple handling
- > Semi-opaque pigmentation

AUTOPLAST SELF-CURING DENTURE BASE MATERIAL

Let it flow

AUTOPLAST was developed specially for the overcast and flask technique. This self-curing polymer is distinguished by its good flow properties.

Modelling made easy

The flow phase was set at about 3 minutes. After a transient phase of 5 to 6 minutes, the material can be modeled for a further 3 minutes. This means that several saddles can be worked easily and correctly with the casting method.

Features

- > Simple handling
- > Good flow and modelling properties
- > Long working time

AESTHETIC COLOR SET EASY FOR INDIVIDUALISTS

AESTHETIC BLUE

AESTHETIC RED

Every patient is an individual, and this should be reflected by the dentures. Customized for the patient to give a natural and unmistakable authenticity.

4 different color hues allow individual pigmentation of the gingiva, easily and quickly. The incident light is refracted by the semi-opaque pigmentation and reflects. This gives the pink of the artificial gingiva a particularly natural look.

FIBRES

»VEINING« OF RESINS FOR DENTURES

The red fibres are incorporated into the denture base materials. This gives the gingiva a »veined« appearance and the dentures look natural.

ORDERING DETAILS

AESTHETIC INTENSIVE COLORS INDIVIDUALIZATION OF THE GINGIVA

AESTHETIC Intensive Colors for the pigmentation of CANDULOR denture base materials for individual, esthetic work. You can create very special accents with the color pigments, which can be dissolved in the monomer. As special as your patient.

Applications

- > Difference from natural gingiva hardly distinguishable
- > Gingiva can be individually shaded to suit the patient

AESTHETIC INTENSIVE COLORS OPAQUE GREATER OPACITY

This highly concentrated pigment is mixed as additional powder in small amounts to the AESTHETIC denture base material to achieve greater opacity. Another indication is the covering of thin acrylic layers in the cervical regions of the teeth and over metal parts.

Applications

- > Greater opacity is achieved when customizing the denture base
- > This reduces the visibility of metal parts, which is particularly beneficial in the case of partial or implant dentures
- > Can be mixed with PMMA resins
- > The powder dissolves easily and mixes well, thus ensuring simple handling
- > The AESTHETIC Intensive Colors Opaque was specially formulated for use with CANDULOR AESTHETIC materials
- > Can be mixed with hot- and self-curing polymers

Characterization with AESTHETIC BLUE and AESTHETIC RED

AESTHETIC LT MODELLING MONOMER MORE TIME FOR CHARACTERIZATION

To obtain a longer modelling phase, you can use the AESTHETIC LT Modelling Monomer to organize your working time better and prevent the denture base material from drying out. It is suitable for use with AESTHETIC Intensive Colors.

Applications

- > The denture base material offers enhanced modelling characteristics due to its smooth consistency
- > This results in simpler handling when characterizing denture base materials
- > Available for hot- and self-curing polymers

TCR MONO & TCR MULTI* DISCS FOR HYBRID WORK PROCESSES

TCR Mono is a tooth-colored, monochromatic stained milling disc.

With the multichromatic colored disc TCR Multi, the harmonious color gradient ensures a high level of esthetics, making subsequent characterization no longer necessary.

The entire product family is made of durable TwinCrossedResin, the 3rd generation TCR material.

The application possibilities of the discs are numerous. They can be used for the fabrication of single teeth and tooth segments, for creating full dentures through to hybrid dentures.

The 20 mm thick TCR Mono und TCR Multi discs with a diameter of 98.5 mm are available in the shades A1, A2, A3, A3.5, B1, B3, C2 and D2. In addition, the bleach shade BL3 is also offered.

XPLEX BASE*

HIGH-IMPACT DENTURE BASE DISC FOR HYBRID WORK PROCESSES

XPLEX Base are 30 mm thick, gingiva-colored milling discs - with a diameter of 98.5 mm - made of impact-resistant denture base material for the CAD/CAM-supported fabrication of denture bases. They are designed to match the CANDULOR XPLEX denture materials.

Features

- > High level of individuality and flexibility in processing
- > Proven CANDULOR quality for high esthetics and natural appearance

Shade range

- 1 Soft Pink – transparent, not veined
- 5 Pink – transparent, veined
- 34 Original Pink – semi-opaque, veined

XPLEX BOND*

BONDING MATERIAL

XPLEX Bond is used for optimal bonding of the milled or fabricated denture teeth to the milled denture base.

AUXILIARY MATERIALS. SPECIALISTS NEED THE RIGHT TOOLS.

Our vision is to create a design which is equal to nature.
We give dental technicians the tools to exploit the full range
of options and to excel – like a musician composing a new
melody.

KMG PASTE

HIGH-GLOSS POLISHING PASTE

KMG Paste is a high-gloss polishing paste for denture acrylics and metals. It is easily washed off and particularly economical to use.

Applications

- > Precise application is possible due to presentation as paste
- > Economical in use, therefore long-lasting
- > Multifunctional use

KMG LIQUID

HIGH-GLOSS POLISHING LIQUID

The liquid KMG Liquid is a universal high-gloss polishing liquid for denture acrylics and metals.

Applications

- > A faster high gloss result can be achieved.
- > The product is easier to dose because it is not quite as fluid; thus providing a higher yield.
- > KMG Liquid is a homogeneous liquid, therefore making it easier to use.
- > It has a fresher color and a more pleasant aroma.

Indications

- > High-gloss polishing of resin or composite veneers
- > High-gloss polishing of resin saddles and resin parts of a prosthesis
- > Metal restorations (e.g. inlays, onlays, cast crowns, etc.)

Contraindications

- > Pre-polishing
- > Compensation of major scratches and grooves
- > Polishing of ceramic work and zirconium
- > Application directly in the mouth

C-PLAST SELF-CURING TRAY MATERIAL

C-PLAST in white and shade 34 is a dimensionally stable autopolymerizing resin that offers good contrast versus most impression materials. The material can be processed for approx. 5 minutes.

Description

- > Individual impression tray
- > Individual base plates for bite templates, intraoral registration plates, tooth setups with wax
- > Preparation of individual anterior tooth guide plates

Indication

- > For use in the treatment of partial or complete edentulism.

AESTHETIC WAX EVERYDAY AND MODELLING WAX

EVERYDAY WAX AESTHETIC WAX SOFT

AESTHETIC Wax Soft is noted for its smooth consistency.

Features

- > Stained in shade 34
- > Solidification point 56 °C

MODELLING WAX AESTHETIC WAX MEDIUM + HARD

AESTHETIC Wax is a special modelling wax in shade 34 for setting up prosthetics, available in two different degrees of hardness.

Features

- > Medium degree of hardness and solidification point 80 – 81 °C (Medium)
- > High degree of hardness and solidification point 84 – 85 °C (Hard)
- > Stained in shade 34

AESTHETIC COLOR WAX CHARACTERIZATION OF WAX DENTURES

We offer 3 ready-mixed modelling waxes similar to the AESTHETIC Color Set Easy to enable the dental technician to design individual characterization of the wax denture.

To design a natural wax try-in, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features

- > Matches CANDULOR AESTHETIC denture materials
- > Gives the patient a feeling for the esthetics of the final product during the wax try-in

ISO-K SEPARATING LIQUID

ISO-K is an alginate-based separating liquid with a proven success record. It is ideally suited for isolating denture base materials, i. e. PMMA resins of all kinds and plaster. This applies to both heat- and cold-curing polymers.

Application

- > Isolation of plaster against resin

Features

- > Excellent separation
- > Readily absorbed into the plaster
- > Very fine separating film

INSTRUMENTS. CLASSICS FOR EFFICIENT AND PRECISE WORK.

CANDULOR instruments are practical aids to simplify daily routine. Matched to meet the needs of dental technicians and dentists they fully support high levels of commitment.

TECHNICAL INSTRUMENT SET AUXILIARY SET FOR PROSTHETIC RESTORATION

The Technical Instrument Set contains all the implements needed for high-grade full dentures.

Content

- > 1 Alameter
- > 1 Modelling instrument
- > 1 Artikont articulating ribbon
- > 1 Sliding caliper
- > 1 Rim Former
- > 1 Profile compass
- > 1 Papillameter
- > 1 Instructions for use Alameter
- > 1 Instructions for use Papillameter
- > 1 Instructions for use Instrument Set

CLINICAL INSTRUMENT SET* AUXILIARY SET FOR DENTISTS AND PROSTHODONTISTS

The Clinical Instrument Set is specifically designed for dentists and prosthodontists to facilitate their everyday work.

Content

- > 1 CRS Set 10
- > 1 CANDULOR Marker
- > 1 Alameter
- > 1 Sliding caliper
- > 1 Rim Former
- > 1 Papillameter
- > 1 Bite fork set
- > 1 Instructions for use Alameter
- > 1 Instructions for use Papillameter
- > 1 Instructions for use Instrument Set

* This product is **not** available within EU countries.

PROFILE COMPASS

TRACING THE CONTOUR OF THE ALVEOLAR RIDGE

Reproduction of the alveolar ridge ensures the correct placement of the teeth as the contour is still easily identified even after the wax template has been applied.

Application

- > Marks the course of the alveolar ridge on the model

PAPILLAMETER

DETERMINATION OF THE LENGTH OF THE UPPER LIP

The lip closure line is one of the most important parameters especially when determining the length of the anteriors. The Papillameter provides the ideal tool for determining the length of the upper lip and thus the lip closure line.

Applications

- > Accurate reading of lip length
- > Simple determination of the length of the anteriors
- > Sterilizable

RIM FORMER

MELTING WAX RIMS

The parallelism of the maxillary and mandibular wax bite is one of the most important prerequisites for correct bite registration. Uniform melting of the maxillary and mandibular bites is necessary, in particular for the parallelism of the wax rims to the Camper's plane.

Features

- > Angled edge on the metal plate defines the dorsal height by applying to the Tuber maxillae
- > Special openings at the rear end facilitate the discharge of melted wax
- > Well-insulated handle

BITE FORK SET CHECKING THE OCCLUSAL PLANE

The proven bite fork is available in a set with four vertical pins that can be unscrewed. The various planes can be clearly defined with the vertical pins and the rubber band. One of the most important parameters in prosthetics is the parallelism between the occlusal plane and Camper's plane or the bipupillary line. Additional reference planes such as the Frankfurt horizontal plane and the axial-orbital plane are also easily determined. The bite fork set is a reliable instrument for checking the correct position of the plane of occlusion.

Features

- > Easy to use
- > Sterilizable

ARTIKONT ARTICULATING RIBBON FOR CHECKING OCCLUSION

The Artikont articulating ribbon is a double-sided marking articulating ribbon made of silk for checking occlusion on the model.

Features

- > Available in three colors
- > High tear resistance
- > Marks repeatedly
- > Easy handling
- > Precision marking/
clear marking

MODELLING INSTRUMENT MODELLING THE DENTURE'S GINGIVA

The handmade tips are well suited for modelling the denture's gingiva or the precise placing of wax and denture base material.

STIPLING INSTRUMENT PROCESSING THE SURFACE TEXTURE

The unique shape of the tungsten carbide stippling bur is exceptionally well suited for processing the surface texture of the denture's gingiva. It carefully carves the resin when forming the lip flange and achieves a natural surface structure.

SLIDING CALIPER SELECTING ANTERIOR SETS

The sliding caliper can be used to determine the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR anterior sets.

ALAMETER

DETERMINING THE ANTERIOR SET

The Alameter is an aid for assessing the suitable anterior set of the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR tooth lines.

Many years of experience have shown that the alinasal width gives an indication of the original position of the canines and thus simplifies selection of the appropriate tooth set in edentulous patients.

The Alameter measures the width of the nose and calculates the most appropriate set of anteriors.

Features

- > Easy to use
- > Fast selection of anterior tooth set
- > Can be used for the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR tooth lines

CERAMIC MIXING TRAY

FOR MIXING RESINS

The mixing tray in high-quality ceramic has 10 bowls for mixing resins plus a further four small bowls which can be used as monomer reservoirs and for handling the fibres.

Applications

- > Specially designed for mixing resins
- > The deeper bowls make mixing the resin particularly straight-forward
- > Extremely smooth and scratch-proof surface – hardened resin is easily removed
- > The sharp edges of the small bowls make it easy to scrape off the brush

DEVICES. DESIGNED TO GIVE THE BEST RESULTS.

The CANDULOR devices give dental technicians the opportunity for best processing of the CANDULOR materials and to create fabrications of the highest quality.

AESTHETIC

COLD

ARTICULATOR CA 3.0

THE NAVIGATOR – NATURAL PROSTHETICS THROUGH THREE-DIMENSIONAL MOVEMENT

The challenge of creating highly esthetic patient work also calls for a natural function of the restoration. The CA 3.0 simulates the natural conditions of the jaw joint and thus offers excellent navigation for daily work.

The articulator excels through its double cone shape of the guided joint section. The technical construction of the articulator is designed to simulate three-dimensional natural movements, and these, in turn, are essential for physiological positioning. The results is esthetic quality that works.

The plate system (Split-Cast) is another distinguishing simplification. The magnets are integrated into the articulator. This allows for clean adjustment without corrosion and plaster deposits.

Technical data

- > Height: 150 mm
- > Width: 145 mm
- > Weight: 690 g
- > Inner construction height: 100 mm (with Split-Cast)
- > Depth: 160 mm
- > Bonwill triangle: 110 mm
- > Balkwill angle: 25°
- > Retrusion track: 1.5 mm
- > Immediate side-shift stop: 0 – 2.5 mm fix
- > Angle of jaw track adjustable between 0° – 60°
- > Incisal plate: 15°
- > Material: anodized aluminum

Art. no.	Product
759233	Articulator CA 3.0 LARGE with 1 Incisal plate 15°, 1 Incisal pointer, 2 Retention discs, 2 Mounting plates, 1 Supporting rod for upper part (opening stop), 2 Plastering covers, 1 Instructions for use CA 3.0

The CA 3.0 LARGE articulator is a higher version of the CA 3.0. Together with the Plate Set for Splitex® and the Calibration Key compatible with Splitex®, the CA 3.0 LARGE can be adjusted to the overall height of 126 mm and synchronized with the Artex® articulators of the Carbon series from Amann Girrbach.

Features

- > Including Splitex® system same construction height as Artex® articulators of the Carbon series
- > Synchronization of several articulators possible
- > The double cone simulates the shape of the joint head
- > Incorporated magnet
- > Natural Bennet movement possible

Technical data

- > Height: 160 mm
- > Width: 145 mm
- > Weight: 735 g
- > Depth: 160 mm
- > Bonwill triangle: 110 mm
- > Balkwill angle: 25°
- > Retrusion track: 1.5 mm

STATIC POINTER

Primarily, the Static Pointer serves to check the autonomous chewing stability of each individual posterior. This increases the positional stability of the entire denture. It is a simple tool to ensure that the posteriors are positioned over the center of the alveolar ridge. In addition, model analysis points and markings on the bite template can easily be projected on the positioning and adopted. Systematic errors are reduced to a minimum with this tool.

Benefits for the user

- > Easy to use as suitable for every existing setup system
- > Easy checking of the autonomous chewing stability of individual teeth
- > Ideally complements the Condyliform® II concept and the Gerber setup technique
- > Facilitates model analysis
- > Easy to teach, easy to learn
- > Millimeter scale on base plate

Benefits for the patient

- > Better positional stability of the dentures
- > No unnecessary restrictions of tongue space
- > Increased chewing ability and wear comfort

Technical data

- > Weight: 276 g
- > Height: 170 mm
- > Width: 110 mm

The device operates on 3 coin cell batteries (LR44).

The integrated laser corresponds to Class 2.

POLYMASTER SELF-CURING POLYMERIZATION

The POLYMASTER is a polymerization device for the casting/pressing technique using self-curing polymers. No acrylic flash is produced during processing, which means no more raised bites. The retention system incorporates a magnet. This ensures reliable repositioning of the model. The ease of investing the models makes for gentler handling and prevents incorrect pressing.

Material and Design

- > Ergonomic Milani design
- > Aluminum lightweight construction
- > Precise conical closure

Features

- > No more raised bites
- > No flask clamp
- > Simple handling
- > Replaceable retention system
- > 2 years guarantee on material defects (proper use is assumed)

Economic benefits

- > Economical use of plaster
- > Time saving of up to 25 minutes versus other press or injection processes

Technical data

- > Weight: 1.8 kg
- > Height: 9 cm
- > Diameter: 13.5 cm

ORDERING DETAILS

POLYMASTER 1 item

Art. no.	Product
662509	POLYMASTER incl. 2 Magnetic retention plates, 1 Allen key, 1 Instructions for use

POLYMASTER Spare parts

Art. no.	Product	Unit
662474	Allen key	1 item
662510	Magnetic retention plates	1 pack of 2 items

Step by Step Instructions

1
Fill the lower part with plaster.

2
Invest the wax-up with the side of the silicone index.

3
Apply plaster to the model and the POLYMASTER lid and close it.

4
After the setting time of the plaster open the POLYMASTER. Let the mixed AESTHETIC BLUE flow into the counter, the gingivo-buccal fold and palate of the model.

5
Close POLYMASTER.

JST FLASK

HEAT-CURING POLYMERIZATION

The JST flask was developed in collaboration with MDT Jürg Stuck. Three allen screws hold the two halves of the flask together, making the cumbersome flask clamp superfluous. Tapered steel guides center the upper and lower halves of the flask on each other to fit gap-free. When using AESTHETIC Intensive Colors (multicolor packing of the gingiva), incorrect pressing of the layer can be prevented by closing the flask asymmetrically.

Features

- > Top and bottom halves screw together with no clamp required
- > Sturdy material
- > Generous inside diameter for large dentures and partial dentures
- > High flask top section allows denture to be retained in an ideal position
- > Conical inside surfaces to facilitate deflasking of the dentures
- > Precise screw fit due to tungsten carbide screws and guide pins

ORDERING DETAILS

REGISTRATION. ENSURING ESTHETICS AND FUNCTION.

Determining jaw relationships is one of the most essential process in partial and full prosthetics. It represents an important link in the logic chain and determines how much time needs to be invested in the further work steps. Esthetics and function can be supported significantly through optimal registration.

CRS SET 10 CANDULOR REGISTRATION SET

Set for intraoral registration with relative bearings according to McGrane for full dentures

The registration set is used to record the joint-related central position of the mandible for full dentures.

CRS SET 15 CANDULOR REGISTRATION SET

Set for intraoral registration with relative bearings according to McGrane for dentulous or partially dentulous jaws and for check-up of full dentures

The registration set is designed for checking full dentures and for registration of the joint-related central position of dentulous and edentulous jaws.

ORDERING DETAILS

CRS SET 20

CANDULOR REGISTRATION SET

Opening and closing registration method

The registration set allows determination of the jaw relationship in dentulous and edentulous jaws. Smaller occlusal corrections of dentures can also be undertaken directly in the patient's mouth. It is, above all, suitable for patients having difficulty with movements and for patients requiring a lot of room for the tongue. It is also used as part of prosthetic measures and functional therapies.

CANDULOR MARKER

WAX PENCIL FOR MARKING THE REGISTRATION PLATES

The CANDULOR Marker is ideal for marking the registration plates of the CRS sets. For this purpose the plates must be slightly warmed up (e.g. with a Bunsen burner, lighter, etc.) and can then be marked with the CANDULOR Marker. The wax pencil is water resistant and ideal for marking/labelling smooth surfaces such as metal, glass, cellophane and resins. The markings can be removed with commercially available disinfectants/wipes.

DENTURE BRUSH FOR CLEANING DENTURES

The CANDULOR denture brush effectively cleans dentures. The large, flat bristle area provides optimum surface contact for thorough cleaning of the external arches. The smaller, wedge-shaped bristle area cleans less accessible parts of the internal arches. Teeth and denture acrylics can thus be thoroughly cleaned from deposits and the remains of food. The nylon bristle tips do not scratch denture bodies. The large, shaped handle makes control of the movement of the brush and denture cleaning easy. The ergonomic design of the handle with its non-slip grip make cleaning easy even for persons with restricted movement.

Features

- > Thoroughly cleans and removes food residues and deposits
- > Does not scratch tooth and denture surfaces
- > Ergonomically shaped handle for control of brush movement
- > The non-slip handle can be securely held, even if the brush is wet

SSOP (SWISS SCHOOL OF PROSTHETICS BY CANDULOR). LEARNING, UNDERSTANDING AND APPLYING PROSTHETICS.

With its comprehensive further education program on removable dentures, the SSOP offers new paths to prosthetic success in the laboratory and in the dental practice. To optimize professionalism and personal development.

EFFICIENT AND PROFESSIONAL TRAINING COURSES WITH THE SSOP

The SSOP is more than standard product or application training. The program offers comprehensive knowledge on removable dentures and makes you an expert step by step – both in theory and in practice with modules that build on each other.

Advantages

- > Developing expertise in a highly interesting professional niche, regardless of whether you work analog, digital or hybrid
- > Gaining routine, confidence and mastery in the realization of high-quality and sophisticated prosthetic restorations
- > Achieving a high level of patient satisfaction due to successful solutions that offer a better quality of life

SSOP offers the right training

- > No matter what previous knowledge you possess, from beginners to seasoned professionals
- > No matter which professional field you are currently engaged in: be it as a dental technician trainee, dental technician, semi-skilled laboratory technician, prosthodontist or dentist

CREATING A NATURAL GINGIVA THROUGH CHARACTERIZATION

In this new workshop, »CREATING A NATURAL GINGIVA THROUGH CHARACTERIZATION«, the individual color design of a denture is demonstrated step by step and worked out in a practical manner. The focus is on the analysis of the different gingival layers and their specific color system. These are demonstrated and practiced with the preset CANDULOR colors 53, 55, 57 and the AESTHETIC Intensive Colors.

Program

- > Demo - simple characterization with three colors
- > Practical exercises of the participants
- > Demo color analysis individual characterization gingiva colors and pigments
- > Practical exercises of the participants
- > Characterization demo in the PolyMaster
- > Finishing and polishing
- > Finishing with the PolyMaster
- > Practical exercises of the participants
- > FAQs / Discussion

Duration

Day 1

SSOP IN YOUR OWN LABORATORY

True to the motto »Bring the SSOP into your laboratory or practice«, the SSOP training program can also be booked as an in-house training course.

With the SSOP teachers on site, anatomical and prosthetic knowledge as well as craftsmanship are enhanced directly in the existing laboratory and practice process.

Advantages

- > Staff can be supported with targeted training to make their daily work even more efficient. This adds to satisfaction, not only in the team.
- > Existing materials and aids can be incorporated directly into the in-house training courses. This also allows processes to be optimized at the same time.
- > In-house training involves less stress and time for the participants and is an effective cost-benefit option

You can find out more about these new formats at:
